

Mock Quiz - Instructor Key

The student print pack contains five one-page A4 forms. Students never need to identify an A-E or 1-5 version. The QR code and the repeated randomized form code identify the correct mapping. The QR payload contains only the course, quiz, form code, and revision - never an answer key.

Form code	Question 1	Question 2	Question 3	Key
K7M2	Data type	Expectation: $P(X=0)=0.75$, high=4	Variance: $\text{Var}(Y)=2$, multiplier=3	B - E - G
R4X9	Expectation: $P(X=0)=0.60$, high=5	Variance: $\text{Var}(Y)=3$, multiplier=2	Data type	A - F - C
T8Q3	Variance: $\text{Var}(Y)=4$, multiplier=3	Data type	Expectation: $P(X=0)=0.20$, high=5	D - B - F
V6N1	Data type	Variance: $\text{Var}(Y)=5$, multiplier=2	Expectation: $P(X=0)=0.40$, high=5	G - C - E
Z3P7	Expectation: $P(X=0)=0.25$, high=8	Data type	Variance: $\text{Var}(Y)=2$, multiplier=4	F - D - A

Operational rule

Use new randomized form codes for every live quiz. Freeze the mapping when printing. The scan grader first reads the QR code and then uses the printed form code as a fallback. A mismatch or unreadable code must enter manual review; the grader must not infer a form from the student's answers.

Mock content note

These questions demonstrate the planned version logic: question order and answer order change across forms, while numerical values vary only within the same expectation or variance calculation. They are illustrative and are not approved course-assessment items.

Preflight before live use

Confirm the 3-digit ID rule, print at 100% scale, test the actual scanner, verify QR detection, and deliberately test light marks, erasures, double marks, rotation, and leading-zero IDs before the first graded quiz.
